

The Planetary Party: Impact Investment Brief

A Coordination Infrastructure for Bioregional Regeneration

What Is the Planetary Party?

The Planetary Party (PPP) is a cultural coordination protocol — a federated, global infrastructure that connects regenerative builders, bioregional organizers, funders, governance innovators, and cultural workers so they can align, resource one another, and scale their work without centralization or loss of local sovereignty.

The PPP can receive both **philanthropic donations and impact investment capital** to deploy in service of bioregional communities worldwide. We are not a single organization trying to do everything — we are the connective tissue that helps communities access the tools, capital, knowledge, and relationships they need to thrive.

The core problem we solve: Regenerative solutions for water, food, shelter, energy, and governance already exist — but they are fragmented, underfunded, and invisible to the communities and funders who need them most. The Planetary Party aggregates these **living solutions** into a coherent, accessible ecosystem and directs capital to where it can do the most good.

How It Works: The Living Spiral Protocol

Every community engagement follows a five-phase cycle that produces lasting, positive-trace infrastructure:

1. **Sense** — Deep listening through community circles and assemblies to surface what is alive and what is needed
2. **See** — Collective mapping of assets, needs, and leverage points via our Bioregional Intelligence Dashboard
3. **Flow** — Capital moves toward what communities name as vital through our trust-based Flow Funding model

4. **Celebrate** — Festivals, gatherings, and cultural activations that seed projects, build momentum, and generate earned revenue
5. **Regenerate** — Track impact, harvest lessons, and reinvest learning into the next cycle

Each cycle leaves behind tangible outcomes: community gardens, water systems, governance models, energy installations, strengthened social fabric, and the local capacity to sustain them.

Unlocking Multiple Forms of Capital for Communities

A central function of the PPP is helping communities unlock capital that has historically been inaccessible to them — not just financial, but across a spectrum:

Capital Type	How the PPP Unlocks It
Philanthropic Grants	Flow Funding deploys unrestricted, trust-based grants directly to community leaders — no applications required
Impact Investment	Commons-aligned investment structures (SPVs) fund tech platforms, dashboards, and learning infrastructure with returns tied to revenue, not extraction
Earned Revenue	Festivals, media licensing, service fees, and marketplace activity generate self-sustaining income streams
Social & Cultural Capital	Guild participation, storytelling infrastructure, and relational networks build trust and collective capacity
Community Currencies	Bioregional utility and governance tokens enable local exchange and participatory decision-making

The Guild System: Co-Creation at Every Scale

Nine open-participation **Guilds** form the functional backbone of the PPP. Anyone aligned with regenerative values can contribute. Guilds operate autonomously while coordinating through the shared protocol — ensuring that local knowledge drives global learning:

- **Living Systems & Solutions** — Food, water, shelter, energy, and ecological restoration
- **Capacity Building** — Training, healing, leadership development
- **Regenerative Capital Flows** — Flow Funds, investment design, multi-capital strategy
- **Governance** — Participatory systems, legal scaffolding, collective decision-making
- **Events** — Festivals, cultural activations, community gatherings
- **Storytelling** — Media, narrative infrastructure, documentation
- **Bioregional Intelligence Dashboard** — Mapping, data, impact visibility, shared metrics
- **Tech** — Regenerative tooling, platform interoperability
- **Ecosystem Weaving** — Cross-guild coordination and synergy

Guilds co-create **in service of bioregional communities** — not as top-down departments, but as distributed, self-organizing teams that respond to what each place and people actually need.

A Global Federated Ecosystem of Tools, Tech, and Enterprises

The PPP does not build everything from scratch. It **aggregates and connects** a rich ecosystem of aligned tools, technologies, and for-profit community-focused businesses operating within and across bioregions:

Technology partners include Spatial Network (mapping intelligence), Catalist (participatory platforms), Social Roots (community organizing), Hylo (DAO governance), and Bloom Network (network weaving) — among others. The **Bioregional Intelligence Dashboard** serves as the interoperability and visibility layer, connecting these tools into a coherent data ecosystem.

Community-focused enterprises within the ecosystem include Micelio Media (storytelling studio), Mycelial Law (earth-law legal practice), Bioregional Embassy (diplomatic agency), Permatours (permaculture action network), and The Pivot Earth (women-led ecosystem

weaving). These ventures generate revenue, employ local people, and keep value circulating within bioregions.

When funds flow into the PPP, they flow out in service of these global tools and local solutions — building shared infrastructure that benefits everyone while ensuring that each bioregion retains sovereignty over how resources are used.

Aggregating Living Solutions for Community Thriving

A defining focus of the Planetary Party is curating and delivering the **living solutions** that communities need to thrive across fundamental dimensions of life:

- **Water** — Watershed restoration, water harvesting infrastructure, sacred water protection, hydrological monitoring
- **Food** — Permaculture food forests, seed saving, bioregional food sovereignty, family food security programs
- **Shelter** — Natural building, regenerative neighborhood design, community land trusts, disaster-resilient housing
- **Energy** — Renewable installations, appropriate-scale systems, community-owned energy infrastructure

These are not theoretical — they are proven, place-based solutions already working across our active bioregions. The PPP’s role is to **make them visible, fundable, replicable, and accessible** to any community ready to adopt them.

Where We Are Today

Bioregion	Status	Focus
Colombia	Active since Q1 2024	Forest/watershed restoration, regenerative governance across 5 regions
Jamaica	Active since Aug 2025	Post-hurricane recovery, Indigenous-led stewardship (Montego Bay)

Bioregion	Status	Focus
Mexico	Active since Oct 2025	Cloud Forest bioregion (Veracruz) and Mexico City
Guatemala	Active since Nov 2025	Indigenous-led listening circles around Lake Atitlan
NE Turtle Island	Launching Q1 2026	Bioregional activation, disaster preparedness, Flow Funding readiness

****Kinship Earth** is our fiscal sponsor for philanthropic capital, and the Na’luea Living Trust is our fiscal sponsor for impact investment. It has raised \$800,000+ since 2024 and it has deployed \$370,000+ to 23 Flow Funders across 12+ bioregions globally, including in the bioregions we’re engaging through the PPP, listed above.

Investment Structure and Capital Roadmap

The PPP accepts both philanthropic and impact capital:

Phase	Timeline	Budget	Funding Type
Phase 1: Governance & Stability	Through Q2 2026	\$180K–230K	Philanthropic
Phase 2: Ecosystem Assembly	Q2–Q4 2026	\$105K–165K	Philanthropic + Impact Investment
Phase 3: Bioregional Pilots	Q3 2026+	\$250K–500K per region	Mission-Aligned Capital

What is investable: Bioregional Intelligence Dashboard, learning platforms and certification pathways, toolkits and service bundles, interoperable tech systems, community currency platforms, and media licensing. All investment is governed through commons-aligned trust frameworks — returns are tied to revenue, not ownership, and investment does not confer voting rights or decision-making power over communities.

What is donor-funded: Governance and administration, legal and fiscal architecture, Flow Fund grantmaking, community engagement and care, storytelling and documentation.

Fundraising targets:

- **2026:** \$5M (PPP)
 - **2028:** \$20M (PPP)
 - **10-Year Vision:** \$200M+ raised and deployed across a global federation of thriving bioregions
-

Why Now — and Why Us

The regenerative movement has matured. The solutions exist. What has been missing is the **coordination infrastructure** to connect them — a protocol that lets capital flow to communities, lets communities access proven living solutions, and lets the entire ecosystem learn and grow together without centralized control.

The Planetary Party is that infrastructure. We are not asking investors to bet on a single technology or a single market. We are inviting you to invest in the **connective tissue of the regenerative economy** — a system designed to serve communities, steward ecosystems, and generate returns that are measured in both financial sustainability and planetary thriving.
